Methodology

The purpose of the community-wide needs assessment is to provide a current snapshot of the well-being of families and children in our Broome and Chenango County service area. The community-wide needs assessment assists Greater Opportunities in designing programs that meet community needs and builds on the strengths and resources of our community. This report also summarizes a quantitative and qualitative exploration of the causes and conditions of poverty. This assessment has demonstrated the complexity of how community health, safety and economic opportunity interconnect with the ability of low-income people to achieve stability and economic security. The report also contains important awareness about the community assets valued by stakeholders, as well as customer sources of personal strength and resilience. This document is prepared in accordance with 45 CFR 1302.11. It provides information compiled from various national, state, and local sources and identifies community trends, the conditions in the service area that impact children and families, the demographic make-up, and other resources in the community. The purpose of the community-wide needs assessment is as follows:

- To guide and solidify the strategic planning and direction of the agency.
- To inform decision-making and program planning
- To educate staff, stakeholders, and agency customers
- To establish the program goals, including long and short-term program objectives
- To address changing priorities within our communities and respond to trends
- To assess community resources and maximize community collaborations
- To identify the service and recruitment area served by Head Start and Early Head Start
- The number of Head Start eligible children and families in the service area and appropriate locations for services

The community assessment was prepared by the staff of Greater Opportunities for Broome and Chenango, Inc. The community assessment will serve as the Greater Opportunities' baseline for identifying current community needs, designing new strategic plans, developing community collaborations, evaluating the effectiveness and progress of current programming and interventions that serve low-income families and children in the community, and for making decisions about programming that can achieve outcomes for individuals and families.

Sources of Data and Data Collection Methods

Numerous data sources were used to describe the demographics of the service area and the physical, social, and economic well-being of the two-county low-income population. The first data gathering phase included surveys distributed to clients in all Greater Opportunities program areas, as well as community stakeholders representing community-based, faith based, private sector, public sector and educational organizations. In addition, focus groups were held with Greater Opportunities customers from all programs, including Housing, Head Start, and WIC. Through the analysis of this data, we were able to collect stakeholder perceptions about the health of the community, the performance of existing community infrastructure, and the conditions of poverty

affecting its residents of all ages. In addition, the use of surveys and focus groups allowed Greater Opportunities the ability to collect information from our customer bases on community assets and sources of resilience that can be called upon on for community challenges.

Quantitative sources of data included population datasets, sources such as the U.S. Census Bureau, Bureau of Labor Statistics, New York State Department of Health, New York State Department of Temporary and Disability Assistance and others. Internal data included information from our agency centralized databases to create a profile of children and families, services received, and services for children with disabilities. These sources included the Head Start/Early Head Start Program Information Report for Greater Opportunities for Broome and Chenango, Inc. The primary data set used for the data collection was the U.S. Census 2015-2019 five- year estimates. Initial data analysis was completed by Greater Opportunities for Broome and Chenango, Inc. Findings, as well as recommendations, were prepared from this analysis for consideration by our Board of Directors and the Head Start Policy Councils. Findings and recommendations will form the foundation for planning and guide the agency strategies for the next several years.

Causes and Conditions of Poverty-Update 2022

Many interconnected factors contribute to the prevalence of poverty in Broome and Chenango Counties. Poverty continues to be a major influence that impacts the ability of individuals to obtain employment and the ability of families to meet their self-sufficiency needs. Two trends are largely responsible for causes and conditions of poverty: a growing shortage of living wage jobs and a simultaneous increase in poverty. The economy, job structure and poverty are inextricably linked. Individuals living in poverty are frequently unable to pay for housing, food, childcare, utilities and health care. The number of recipients receiving Temporary Assistance for Needy Families (TANF) in Broome and Chenango County has continued to increase over the past three years. The number of households receiving Supplemental Security Income (SSI) has also increased over the past few years, with 7,149 households in Broome County and 1,652 in Chenango County receiving SSI.¹ The problem is only compounded for an individual/family that has documented disabilities, such as mental illness and/or chemical addiction, as these individuals and families need to further navigate a system of service providers to get their additional needs met. Difficult choices must be made when limited resources cover only some of the necessities.

Traditionally, research has identified the opportunities for socioeconomic advancement in the form of employment opportunities and/or higher wages. Rents are becoming increasingly unaffordable, especially to those employed in the service or retail sectors. Per the U.S. Census data nearly half of Broome and Chenango County is employed in service occupations, such as retail and hospitality sectors, that often pay a lower wage and do not offer the range of benefits that professional

¹ Social Security Administration 2019 https://www.ssa.gov/policy/docs/statcomps/ssi_sc/2019/ny.pdf

occupations provide.² The COVID-19 pandemic has only compounded this issue, as many of these sectors were forced to lay employees off for an extended period of time or close altogether due to the economic climate. In addition, the COVID-19 pandemic has forced many of the manufacturing companies to lay off a large percentage of their workforce, leaving many unemployed or underemployed. In regards to manufacturing jobs stabilizing, this has not yet to be determined. Broome and Chenango County are still haunted by the long-term manufacturing industry trend, as much of our work is rudimentary in nature and can be easily outsourced into lower cost markets. Advanced, specialized, or niche production can only survive in a competitively priced global market.³ The top 25 job openings in our area require a specific level of education, usually requiring additional training. The local Department of Social Services reported that many people applying for assistance is due to unemployment benefits ending, limited job availability, and people not having the education or skills to obtain employment. DSS continues to see people needing assistance with housing, food, utilities and health care. There are very few job opportunities for individuals with a High School Education/GED or less. For individuals struggling to pay the rent, a serious illness or disability can start a downward spiral into homelessness, beginning with a lost job, depletion of savings to pay for care, and eventual eviction.

Other caused of poverty can be attributed to a breakdown of social systems. Housing has become scarcer for those with little money. Earnings from employment and from benefits have not kept pace with the cost of housing and utilities for low-income and very low-income individuals. New York State Electric & Gas (NYSEG) has asked for substantial increases in recent years, which has made housing costs an even greater portion of a household budget. According to the National Low-Income Housing Coalition, an individual earning \$761.00 a month from SSI can afford no more than \$228 a month for an efficiency or one-bedroom unit while the fair market rents set by HUD are \$634 and \$668 a month respectively. The Fair Market Rent (FMR), according to the 2022 HUD Fair Market Rents Schedule, for a two-bedroom apartment is \$855 a month in Broome County and \$767 a month in Chenango County, and a one bedroom is \$668 per month in both counties. In order to afford this level of rent, without paying more than 30% of income, a family must earn \$33,900 per year and an individual must earn \$26,000 respectively a year. With rents unaffordable and the cost of utilities increasing, many individuals and families are forced to live in substandard housing, with family and friends, or in shelters and/or streets.⁴ Due to the COVID-19 pandemic, an eviction moratorium was issued in New York State in March 2020. Because of this moratorium, individuals and families that are living in substandard housing or are experiencing homelessness, have been unable to secure housing due to the lack of mobility among renter households. Although the Moratorium was lifted in January 15, 2022, both counties continue to struggle with housing issues. Many small landlords across Broome and Chenango County have gone nearly two years without any rental income. And while the moratorium has been lifted, many are still waiting for their day in court due to an immense back

⁴ www.nlihc.org (online) 2019

log in the County court systems, which has further exacerbated housing shortages in each area. In addition, due to the fact that many landlords have gone so long without payment, some have instituted stricter standards about renting to individuals without stable employment and income, leaving those with subsidies from Section 8 and/or local departments of social services having a more difficult time in securing permanent housing.

The nature of public service systems, especially in communities that lack needed resources, can create barriers for those trying to improve their economic mobility which can be linked to generational poverty. Within both Broome and Chenango County, the transportation systems are severely inadequate, especially in the rural locations. In addition, both communities lack adequate services to meet the mental health, addiction, oral health, and physical health care needs of individuals and families. Lack of transportation resources also can be noted as a cause of poverty and poor health as it limits the ability of individuals to reach needed resources, such as food and/or medical care, and can present as a barrier to maintaining employment or attendance in career training programs.⁵

Education and access to education can be the key to moving out of poverty. The better public schools are often found in communities with higher income, with poorer schools being located in low-income neighborhoods. In addition, access to higher education is often blocked due to affordability, crowding, and the potential of a huge debt burden afterwards. Poverty is also more prevalent among specific cohorts based on age, gender, and race. Persistent issues of race and gender mean higher poverty among minorities and women. Many seniors are also forced to live on a fixed income from retirement, SSI, or SSD and these resources not provide enough to meets the rising cost of living.⁶ The COVID-19 pandemic has only exacerbated the systematic inequities often stemming from structural racism in education, employment, and housing.

In Broome and Chenango County, there is a prevalence of high rates of unemployment, crime, illicit drug abuse, teenage pregnancy, mental and physical disorders, single-parent female households, child maltreatment, high levels of movement out of the area, lack of child and adult health and mental health services, and low developmental outcomes achieved for children and adolescents. These problems can be the direct consequences of poverty and data collected for this community needs assessment indicates that the cost of living continues to rise and poverty rates have remained consistent over time. For our service area, the poverty rates are higher than a majority of New York. Also, child poverty rates are higher than poverty rates among other groups which can contribute to collective disadvantages over time leading to generational poverty.

Health discrepancies can be a consequence and condition of poverty. Lack of affordable health insurance often puts families and individuals at risk for poor health outcomes. In addition, lack of medical and mental health services can lead to individuals not being able to work and in rural

⁵ Center for Community Futures, "Analyzing the Causes and Conditions of Poverty," *Masters and Stansbury*, 2017.

⁶ Center on Budget and policy Procedures (online) 2021 www.cbpp.org/research/poverty-and-inequality/tracking-the-covid-19-recessions-effects-on-food-housing-and-resources

communities, such as the majority of our service area, there is often lack access to these services. In both Broome and Chenango Counties, there is a higher rate of mental and physical health issues than most areas in New York State, however, there is a shortage of medical, dental, and mental health providers in our area. In addition to limited availability of certain services, our community is home to a large number of neighborhoods without readily available access to fresh, healthy, and affordable food, which can contribute to higher levels of obesity and other health related concerns.

Although the consequences and conditions listed above is not exhaustive, it demonstrates that assisting individuals and families in overcoming poverty is a lengthy endeavor that will only happen through personal and systematic change. Agencies, like Greater Opportunities, must utilize innovative strategies and programs that address the needs of those experiencing poverty, as well as addressing the underlying causes of poverty.

Findings and Recommendations-Update 2022

Finding 1: The COVID-19 pandemic has only heightened the inequalities present in our communities and has made accessing needed resources and services, making the efforts of low-income people to achieve economic stability even more constraining.

Recommendations for Finding 1:

- *Prioritize unrestricted funding for safe and socially distant activities, such as an outdoor movie night or game night, to allow families and children the opportunity to engage in activities that encourage socialization.*
- *Provide staff training on how the COVID-19 pandemic has affected individuals and families, both emotionally and physically, and methods for assisting individuals and families in coping with the added stressors the pandemic may have caused.*
- *Create and provide training curriculum for individuals and families on how to navigate the new programs and resources that have developed during the pandemic. Examples can include the following: a training program for parents on how to use Chrome Books and remote access school programs (i.e. Zoom, Schoology); Classes that assist individuals in how to apply for resources, such as unemployment benefits, rental assistance, or accessing virtual appointments; and finally, support groups that allow individuals and families to discuss their concerns and work collectively to generate strength-based solutions.*
- *Create innovative ways of having parents and caregivers participate in and be active in the classroom so that they feel fully engaged in the educational process, even in a virtual world.*
- *Program leaders should fully engage in community-wide initiatives and efforts that advocate for the expansion of public transportation, especially in rural areas, to allow greater access to services.*

Finding 2: Mental and behavioral health conditions, including addiction services, affect many individuals and families in the Greater Opportunities service area. Lack of these services is identified as a concern by stakeholders and clientele, while access to formal mental health services in each county is limited. When individuals and families face challenges or feel undervalued, many will access personal sources of strength and support to obtain emotional security.

Recommendations for Finding 2:

- *Continue efforts to teach and develop social-emotional competencies in individuals and families by utilizing research-based methods including, but not limited to, trauma-informed care, active listening, intensive interventions, and targeted social-emotional supports.*
- *Research social-emotional assessments used to determine the needs of individuals and families to ensure that they take into consideration the circumstances and community factors that may affect those that are economically disadvantaged, such as family dynamics, housing conditions, and access to resources. Individual Service Plans and development of personal goals should be based on the conditions and circumstances of the community in which they live. Assist individuals and families in determining their goals and how to reach those goals based on what is available to them.*
- *Continue to work with community service providers to expand and improve access to mental and behavioral health treatment, through the development and utilization of peer-to-peer advocates, mobile mental health crisis teams, and other innovative strategies to support emotional well-being and treatment compliance.*
- *Raise community and client awareness of substance abuse prevention initiatives, including Narcan training, use of evidence-based programs that have demonstrated positive results based on scientific evidence, and the promotion of programs that enhance protective factors and reduce risk factors.*

Finding 3: Due to the rising costs and limited availability of quality early childhood programs, families face challenges in trying to both secure and/or maintain gainful employment and having high-quality early childhood education for their young children.

Recommendations for Finding 3:

- *Expand Early Head Start model and slots for center-based programming in both Broome and Chenango County. This initiative will provide education benefits from birth to age 3, while assisting in the reduction of childcare cost to parents and providing them an opportunity to obtain employment.*
- *Continue to explore Head Start and Early Head Start program models to ensure the provision of high-quality programming provision of intensive service delivery for*

children and the need to increase wages for Head Start personnel in order to avoid high turn-over rates in staffing. This would assist our programs in being in more uniformity state preschool programs operating in New York State.

- *Explore collaborations with school districts and other service providers to provide wrap-around care and summer program options to Head Start children and families to relieve the child care cost burden for participating families.*
- *Continue to explore available buildings to be owned and operated by Greater Opportunities in order to expand and maintain our current Early Head Start, Head Start, and UPK programming. By owning our sites outright, Greater Opportunities would have permanent locations in order to provides educational, social, and emotional programming for children and families.*

State of the Grantee

On July 27, 2020, Opportunities for Broome, Inc. merged with Opportunities for Chenango, Inc. to create the current agency of Greater Opportunities for Broome and Chenango, Inc. The unique thing about OFB and OFC's decision to merge, is that neither agency needed to merge. Both agencies had remarkable reputations with funders and were considered strong agencies within our communities. The former OFB and OFC were not weak agencies, looking to survive in a turbulent economic climate. Rather, they were progressive agencies looking to see what we could do better to serve our clients and our communities by coming together as one.

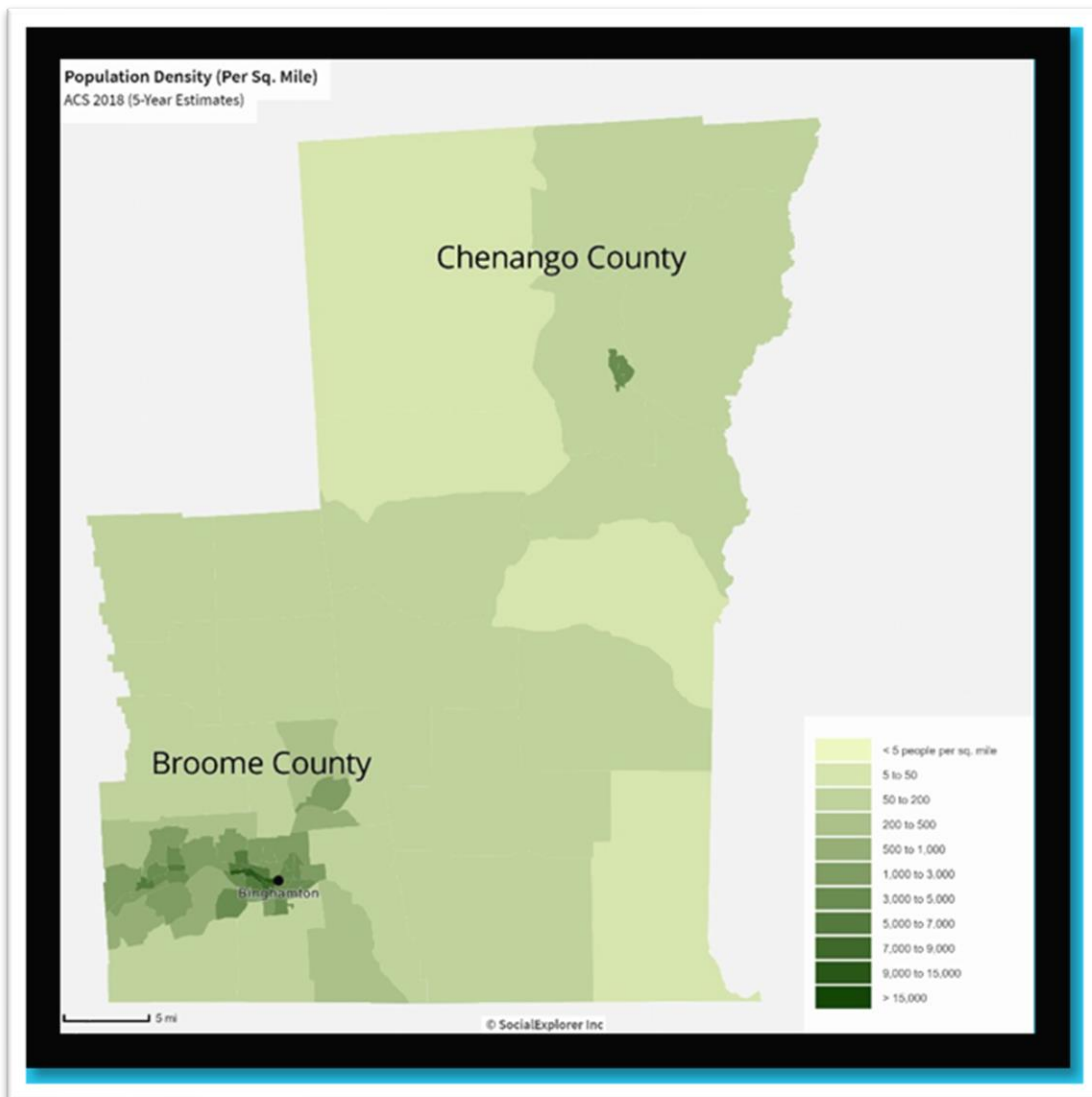

In 2013, Opportunities for Broome and Opportunities for Chenango, Inc. began discussing the possibility of a merger of the two agencies. With economic down turns and possible funding scarcity, a merger would accomplish multiples goals: enhance organizational capacity to achieve results; reduce administrative costs; increase flexibility to meet the needs of the clients we serve; and provide an opportunity to focus on our mission of empowering people and our communities. Although bigger is not always better, a merged agency would provide the agency the capability of adapting to meet the needs of their communities and those they serve. With the dedicated support of the Board of Directors, the trust and support of the personnel of both agencies, and a tremendous amount of hard work, the merger became a reality.

Since 1965, Greater Opportunities has helped to serve their respective communities with their greatest needs. Community Action Agencies, like Greater Opportunities, were born out of President Johnson's War on Poverty and were designed with the idea that local communities know best how to meet their needs. Greater Opportunities receives seed-funding from the federal Community Services Block Grant (CSBG). The mission of Greater Opportunities is to educate, advocate, and empower individuals and families to improve the quality of their lives through the development of self-reliance, while promoting a culture of people working together to help themselves, one another, and their community. The braiding of community resources and the building of effective partnerships, serves as the cornerstone for the foundation and success of the agency. Greater Opportunities works with

their customers to help create the opportunities and programs that work for them as individuals. They do this with a hands-on approach in order to help track their progress and ensure their on-going journey to success. Greater Opportunities currently serves all of Broome and Chenango County and provides numerous services to the community through the following departments:

- Early Childhood Services: Head Start and Early Head Start
- Energy Services
- Supportive Housing Services
- First Time Homebuyer Programs
- Rehabilitative Housing Program

Service Area Profile

Population

Population change within the report area from 2000-2019 is shown below. During the sixteen-year period, total population estimates for the report area declined by -4.3 percent, decreasing from 251,937 persons in 2000 to 241,097 persons in 2019. Since 2000, the service area counties have experienced a population decrease while the remainder of New York State, and the nation as a whole, experienced population increase.

Report Area	Total Population, 2019 ACS	Total Population, 2000 Census	Population Change from 2000-2019 Census/ACS	Percent Change from 2000-2019 Census/ACS
Report Location	241,097	251,937	-10,840	-4.30%
Broome County, NY	193,188	200,536	-7,348	-3.66%

Population, Density (Persons per Sq Mile) by Tract, ACS 2015-19

Age and Gender Demographics

Population by gender within Broome and Chenango County is shown below. According to the ACS 2015-2019 5-year population estimates for the service area, the female population comprised 51.06% of the report area, while the male population represented 48.94%. Aging has a significant impact on society. People of different ages and gender tend to differ in many aspects, such as legal and social responsibilities, outlooks on life, and self-perceptions. Young people tend to have fewer legal privileges (if they are below the age of majority), they are more likely to push for political and social change, to develop and adopt new technologies, and to need education. Older people have different requirements from society and government, and frequently have differing values as well, such as for property and pension rights.

[View larger map](#)

Median Age by Tract, ACS 2015-19

Both Broome and Chenango County features a male majority population, which has been a shift over the last several years. Areas in which the population is comprised of a greater proportion of women than men may be more impacted by issues related to gender equality. Research has shown that gender and poverty can be linked. For example, a woman’s risk of living in poverty is closely related to her marital and family status. Studies have shown that more single mothers within an area, contribute to higher rates of poverty within that area.

Households

The change in number of households within the report area from 2000 to 2015/2019 is shown below. Total households for the report area decreased by -1,429 * -1, or -1.42% in those counties reported in the 2019 American Community Survey (ACS) 5-year data. This compares to a statewide increase of 4.06%.

Report Area	Total Households (2000)	Total Households (2019)	Change in Households	Percent Change
Report Location	100,675	99,246	-1,429	-1.42%
Broome County, NY	80,749	78,549	-2,200	-2.72%

New York	7,056,860	7,343,234	286,374	4.06%
United States	105,480,101	113,661,693	8,181,592	7.76%

Note: This indicator is compared to the state average.
Data Source: US Census Bureau, American Community Survey, US Census Bureau, Decennial Census, 2015-19. Source geography: County

Families

The American Community Survey (ACS) estimated there were 59,272 families in the report area in 2019. Married couple families comprised 72.78% of the total number. Families headed by men without wives comprised 7.96% of the total, while women without husbands headed 19.26% of families. Children living in single-parent households are overrepresented all areas of Greater Opportunities programming, including Head Start and Early Head Start. For children, growing up in single-parent households can increase their risk of poverty, physical health issues and mental health problems later in life.

Report Area	Total Number of Families	Married Couple	Female, Spouse Absent	Male, Spouse Absent
Report Location	59,272	43,138	11,418	4,716

[View larger map](#)

Single Parent Households with Children (Age 0-17), Percent by Tract, ACS 2015-19

Children from single-parent households, especially those living with single-mothers, are more likely to have moderate to very poor health outcomes, score higher on the emotional problem scale, and may experience more home environmental stress. These conditions most likely stem from lack of access to resources, which is evident in the reduced income for single mothers as demonstrated throughout the community assessment data. Single mothers also face additional barriers because they are frequently the only caregiver for their children.⁷

Poverty

2019 poverty estimates show a total of 38,330 persons living below the poverty level in the report areas. Poverty information is at 100% of the federal poverty income guidelines.

Report Area	All Ages		Age 0-17		Age 5-17	
	No of Persons	Poverty Rate	No of Persons	Poverty Rate	No of Persons	Poverty Rate
Report Location	38,330	15.90%	10,780	22.66%	7,087	20.30%
Broome County, NY	31,962	17.8%	8,893	24.9%	5,920	22.8%
Chenango County, NY	6,368	13.7%	1,887	20.1%	1,167	16.9%
New York	2,471,760	13.1%	716,817	18.2%	485,664	17.2%

Key Findings-Update 2022

In 2022, the poverty rate in Broome County was 18.54% and 12.91% in Chenango County. Broome County had the third highest poverty in New York in 2022, which Chenango County being ranked 31st in the state. The poverty rate in the United States continues to be highest among people between the ages of 18 and 24 years old, with a rate of 17.1 percent for male Americans and a rate of 21.35 percent for female Americans. Since April 2020, the share of children with at least one unemployed

parent has consistently remained above reported rates due to the COVID-19 pandemic. More than 4 in 10 children live in a household struggling to meet basic expenses, and between 7 million and 11 million children live in households in which they are unable to eat enough due to higher cost of living. With COVID-19 forcing schools to shift to distanced and virtual learning, it not only caused further barriers to quality education for low-income children, but also pushed their parents, particularly mothers, to choose between caregiving and employment. At present, some calculations are finding that the child poverty rate has increased dramatically since the onset of the coronavirus crisis.⁸ The elderly population have traditionally been a subset of the population that has been vulnerable to poverty due to many livings on fixed incomes that do not increase with increases in the cost of living. The COVID-19 pandemic has exacerbated the elderly population’s risk for living in poverty as this population was expected to keep themselves safe at home to avoid the risk of contracting the virus, but many of them still depend on going out to work in order to supplement their retirement income. Loss of income, paired with difficulty in accessing resources, lack of social supports, and lack of access to technology, such as tablets and cell phones, has made the elderly even more susceptible to falling below the poverty line.⁹

Violent Crime

Occurrences of violent crime within the report area are shown in the table below. According to the New York State Division of Criminal Justice Services reporting system, a total of 7 murders, 503 aggravated assaults, 85 robberies and 178 rapes took place within Broome and Chenango County in 2020.

⁸ <https://www.americanprogress.org>; *The Basic Facts About Children in Poverty*. 2021

Key Findings-Update 2022

The COVID-19 pandemic has caused significant ripples through the employment sector. Many businesses were either forced to close due to social distancing guidelines or to have people work from home, which drastically changed how companies normally did business. Many other workers were deemed essential and continued to work in hospitals and grocery stores, on garbage trucks and in warehouses, yet under new protocols to reduce the spread of the virus. The COVID-19 pandemic has impacted economic sectors disproportionately. The leisure and hospitality sector lost the largest number of jobs since January 2020, and individuals last employed in these sectors have consistently exhibited some of the highest unemployment rates. Additionally, the education and services sector and the government sector have exhibited the second and third-largest losses in jobs since January 2020, which have had previously low unemployment rates among individuals last employed in these sectors.

Due to the pandemic, Congress had supplied three rounds of stimulus checks for families, expanded nutrition assistance programs, and enacted increases in refundable tax credits. These benefits have increased families' disposable income and have increased consumer spending, which has assisted businesses in enduring the recession. In addition, Unemployment Insurance (UI) program benefits were increased and the length of coverage was extended. There is concern this policy could directly lead to the unemployment rate remaining above what it would be otherwise because past research has shown UI extensions can disincentivize people from returning to work. However, by extending and increasing unemployment, individuals have increased spending which may insulate the labor market from further deterioration.¹⁰

¹⁰ <https://crsreports.congress.gov> *Unemployment Rates During the COVID-19 Pandemic*. 2021

In 2022, there has been a trend, known as the “Great Resignation” on the part of workers, encouraged by a low unemployment rate, to quit less-desirable jobs and exercise much greater choice in regards when and where to work. Data shows that New York State ranks lowest or second-lowest among all states in job openings, hires, and quits and that New York’s pandemic jobs deficit is much greater than all other states. This demonstrates the individuals in our state are looking for work to the same degree they were before the COVID-19 Pandemic, but they are finding jobs in much smaller numbers. In turn, employers are in a hiring crisis as they have open positions, but cannot find individuals that either want positions offered or are unqualified for the positions.¹¹

Commuter Travel Patterns

This table shows the method of transportation workers used to travel to work for the report area. Of the 105,372 workers in the report area, 80.2% drove to work alone while 9.0% carpooled. 2.7% of all workers reported that they used some form of public transportation, while others used some optional means including 4.3% walking or riding bicycles, and 0.6% used taxicabs to travel to work.

Key Findings

10.1% of households in Broome and Chenango Counties do not have a vehicle, a rate lower than that of the state and higher than that of the nation. A lower portion of residents opt to take public transportation, bicycle, or walk to work, especially in Chenango County where very limited public transportation currently exists. Although the larger areas in Broome County have a public transportation system (Binghamton, Johnson City, Endicott, Endwell, and Vestal), this system is not accessible to those living in the rural areas of the county. Due to the fact that public transportation is extremely limited in the rural areas in both counties, individuals and families must prioritize owning a vehicle in order to work and have access to services. Due to many families having limited budgets, more often than not, their vehicles are often bought used with higher miles and mechanical issues. This leads to individuals and families having to pay a larger percentage of their income on vehicle maintenance in order to maintain employment and access needed resources.

COVID-19 has further exacerbated the transportation issue within both counties. Due to the social distancing restrictions, those with larger families had to pay more for taxi services to go grocery shopping or attend appointments as they were required to be picked up in a larger vehicle which has a higher rate per mile. Additionally, vulnerable populations, such as the elderly and those living in poverty, had difficulty in obtaining transportation in order to get tested or get vaccinated against the COVID-19 virus. Fortunately, some local community-based agencies were able to assist with transportation in attending medical appointments. For example, Getthere is a mobility management program of the Rural Health Network of South-Central New York serving Broome, Chenango, Delaware, Otsego, and Tioga Counties. Getthere seeks to improve transportation access and coordination in rural communities and is a one-stop source of help for those seeking assistance with transportation and mobility. With the cost of transportation continuing to rise, Greater Opportunities will need to advocate for and seek partnerships with agencies that can assist low-income families in accessing reliable transportation.

Education

Education can be a strong determinant of socioeconomic status and health outcomes. When an area makes concerted efforts to increase the educational level in a population, there will be a decrease in poverty and improvement to the overall population health. Data has shown that on average, those with more than 12 years of education have a higher life expectancy than those with 12 or fewer years of education. Individuals with lower levels of education often have less income and reduced access to health insurance and other resources they may need to attain self-sufficiency.

School Enrollment

Population with No High School Diploma (Age 18+), Percent by Tract, ACS 2015-19

In the service area counties of Broome and Chenango, the U.S. Census Bureau estimates that of the population over aged 25 years, 35% have attained at most a high school diploma, which is higher than the state of New York (26.1%). Additionally, 12.9% of the service area population has attained at most a bachelor's degree, which is lower than the state (20.2%).

Graduation Rate

Black/African American residents had the lowest graduation rate in Broome and Chenango counties, with 69% graduating in the combined service area.

Graduation Rate by Race/Ethnicity 2020 (NYSED, 2021)		
Race/Ethnicity	Broome County	Chenango County
Asian	96%	88%
Black/African American	71%	100%
White	88%	88%
Hispanic/Latino	74%	92%

Adult Literacy Rate

Within the service areas of Broome and Chenango County, adults have a higher literacy rate than the state and nation.

Adult Literacy (National Center for Education Statistics, 2021)	
Report Area	Lacking Literacy Skills
Broome County	11.0%
Chenango County	12.0%
New York	22.0%
United States	14.6%

Key Findings

From kindergarten through adulthood, access to education sets people up for a lifetime of success, whether it be in school or in the job market. However, the American education system has started to bend to inequality, with the United States trailing nearly all other industrialized nations when it comes to educational equality, according to the Organization for Economic Cooperation and Development annual report of educational statistics from around the world. A low percentage of American adults are achieving a higher level of education than their parents did, especially among 25- to 34-year-olds, where only 20 percent of men and 27 percent of women, both out of school, have achieved a higher level of education than their parents. This situation only gets bleaker for those with less education as only one in 20 Americans aged 25 to 34 whose parents didn't finish high school has a college degree. This particularly hurts the poor

as the graduation rate of youths in the poorest fourth of the distribution increased to 9 percent from 5 percent; among the richest fourth it rose to 54 percent from 36 percent.¹²

Childhood experiences directly influence who a child becomes as an adult. Every piece from their early life affects their future path and careers they will choose. For low-income families, it is easy to veer off the path towards educational attainment. This may include long travel times for people using public transportation for work commutes; lack of access to affordable childcare; underdiagnosed or untreated mental health issues; and lack of confidence and trust in the education system among caregivers that may have had poor experiences in elementary and high school. Head Start and Early Head Start programs are uniquely positioned in that the two-generation service model is particularly impactful at developing and empowering families, so they are able to lift themselves out of poverty and towards self-sufficiency. Increasing participation in educational programs is critical in this endeavor as it is vital at an early age to instill in children, as well as their parents, the importance of learning and education.

The COVID-19 pandemic continues to impact the American educational system, as evidence shows that the pandemic has negatively affected academic growth, while widening pre-existing disparities. In primary subjects like math and reading, there are concerns that some students might be falling even further behind pre-pandemic expectations. The COVID-19 pandemic has also impacted the access and opportunity facing many students, including technological and other barriers that make it harder to participate in virtual classrooms. Furthermore, for students with disabilities, COVID-19 has significantly disrupted the education and services needed to support academic progress and prevent regression.¹³ Greater Opportunities programs provide vital resources in supporting individuals and families in obtaining education and career training to improve their financial security.

Early Care and Education-Update 2022

During the early years of children's development, rapid brain growth occurs and important bonds with caregivers are formed. Supporting children's learning and health during this time influences the degree to which they will be prepared for kindergarten and a lifetime of success. Some research indicates that a month of early childhood learning is equal to an entire year of adult learning. Additionally, children who fall behind in this stage of development often fail to catch up as they move through the elementary education system, making high quality early childhood education all the more important. To mediate these discrepancies, early care and education needs to be of the highest quality possible. Because of the amount of time children spend in out-of-home arrangements, the quality of the setting can either significantly harm or support development and health. Unfortunately, obtaining adequate early education and support can be an insurmountable barrier for parents and children due to several factors related to the cost, quality, and availability of care. This section of the community assessment examines the landscape of early care and education programs for low-income families in the counties of Broome and Chenango and offers suggestions for how

Quality Disparities for At-Risk Children

Evidence from the NICHD Study of Early Child Care suggests that children in disadvantaged and racial/ethnic minority families disproportionately experience poor quality childcare. The NICHD study also found that school readiness systematically varies across different types of childcare settings.

Using data from the Longitudinal Survey, Birth Cohort study, in *Quality Disparities in Child Care for At-Risk Children: Comparing Head Start and Non-Head Start Settings* the authors demonstrate a disparity in the quality of childcare and early education services for at-risk children that mirrors the NICHD study. According to the data, African American children were found to experience the lowest quality care across all types of childcare settings. Being placed in lower quality childcare was associated with less maternal education and African American and Hispanic ethnicity. Data from the study also illustrated that center-based Head Start programs provided higher-quality care for at-risk children, which shows the need for expansion of these types of programs in areas with limited access to high-quality care for at-risk children.

Factors that contribute to the lack of placement of children of color in high-quality childcare programs include living in a low-resource neighborhood that is racially and socioeconomically segregated that provides limited access to the full range of child care options, selection bias in which families are not aware of quality indicators, and the employment characteristics of parents influence the child care needs of families. For example, low-income working parents face several challenges related to work schedules including a greater likelihood of having part-time work, non-traditional hours, and fluctuating schedules.

Number and Percentage of QRIS-Participating Programs at the Top Level, by Program Type.

<https://www.childcareaware.org/our-issues/research/ccdc/>

Affordability of Child Care

According to Child Care Aware of America, in 2020, Center-based child care cost 14.7% of income for infants and 13.8% for toddlers in New York State; a large percentage of families' income.

Work Status of Population with Children Under 6 Years Old

The service area for Broome and Chenango Counties had a lower percentage of households with both parents in the labor force for households with children under 6 years old than the State of New York. In the service area, 76.2% of female householders from single-parent households were in the labor force. Overall, 71.8% of service area children had all parents in the labor force.

Attendance and Enrollment

As of December 2020, child care attendance remains 32% down from pre-COVID attendance.

Vacancy Rates

The U.S. Census Bureau provides vacancy data based on American Community Survey 5-year estimates (2015 - 2019). Vacancy rates for the report area are reported below. Vacant non-rental housing totals 2,055 units and includes those for sale only and sold but not occupied. For the report area, that is a non-rental housing vacancy rate of 1.76%, in comparison the national rate is 1.39%. Vacant rental housing totals 3,589 units and includes those for rent and rented but not occupied.

For the report area, that is a rental housing vacancy rate of 3.08%, in comparison the national rate is 2.47%. Vacant other housing totals 11,681 units and includes those used for seasonal, recreational, or occasional use, as well as units used for migrant workers. For the report area, that is another housing vacancy rate of 10.02%, in comparison the national rate is 8.27%.

Point in Time Homeless

Point-in-time counts (collected January 25, 2021) were conducted by the NY-511 Continuum of Care, which serves Broome, Chenango, Tioga, Otsego, Cortland, and Delaware Counties, on behalf of U.S. Department of Housing and Urban Development (HUD). The purpose of the NY-511 CoC is to break the cycle of homelessness by assisting persons at-risk and experiencing homelessness move into permanent housing, overcome housing stability barriers, and become self-sufficient.

2021 Point-in-Time Count NY-511 Binghamton, Union Town/Broome, Otsego, Chenango, Delaware, Cortland, Tioga

Key Findings-Update 2022

Chenango County continues to struggle with many housing issues. Per the 2020 ACS, 21.2% of Chenango County's housing units are mobile homes, as compared to 2.4% in New York State and 6.5% in the nation. The median value of owner-occupied homes in Chenango County is \$102,300, which is significantly lower than both the state and national average. Most residents in the county live in single family units, with only 15.6% living in multiple unit dwellings. There are 24,421 occupied housing units within Chenango County, with only 19,897 of the units being occupied, which may be reflective of poor housing conditions and the population decline in this county. Of the single-family homes in Chenango County, 46% were built before 1960. Of great concern is the number of housing units lacking complete plumbing or kitchen facilities. According to the American Community Survey (2020), of the 19,897 occupied housing units in Chenango County, 59 are lacking complete plumbing facilities (0.3%), 184 are lacking complete kitchen facilities (0.9%), and 456 have no telephone service available (2.2%). Homeownership in the county is high at 75.6%, including mobile homes. Of all renter households in the area, 36% are considered cost burdened (paying 30% or more of annual income) and 16% are designated as severely cost burdened (paying 50% or more of annual income). 92.3% of renter households are listed as having income below the federal poverty level, or of very low (50% of area median income) or extremely low income (30% of area median income). There is a relatively high home vacancy rate (19.4%), which may be reflective of poor housing conditions and the population decline in this county. The areas current economic climate has led to an increase in mortgage defaults. This is a direct result of recent layoffs, particularly in the manufacturing sector of the local economy. 1 in every 1,549 homes in Chenango County is in a stage of the foreclosure process, either pre-foreclosure, auction or bank owned.

According to the 2022 Poverty Report issued by the New York State Community Action Association (NYSCAA), there are currently 192,042 individuals residing in Broome County, with 33,812 (18.5%) of those individuals currently living under the Federal Poverty Level. Within the City of Binghamton, the total population is 44,819. Within the last 13 years, there has been a decline in Broome County's population. Significant changes occurred in 2006 and again in 2011, after the area was hit with two major floods contributing to families relocating around the county and out of the area. In addition, significant portions of available housing stock were eliminated or significantly damaged due to this flooding.

The 2020 U.S Census American Community Survey Report estimates that there is a total of 91,155 occupied housing units within Broome County, of which 65.1% are owner occupied and 34.9% are renter occupied. According to 2020 American Community Survey, of those units that are renter occupied, 45.6% are paying greater than 35% of their income on rent. Over 76% of the housing units within the City of Binghamton were constructed prior to 1960. The Blueprint Binghamton Comprehensive Plan of indicates that over 50% of renter occupied housing units have a housing problem and that almost of all of these units are occupied by households and individuals that fall within HUD's low-income guidelines. Changing flood maps and the rising cost of flood insurance

threaten whole neighborhoods. And these threats follow on the complete restructuring of the national housing market as a result of the subprime mortgage crisis that began in 2008.

One of the greatest challenges facing both Counties at this time is affordability. The decline in overall population since the 1990s is due to the job growth remaining very limited. Job seekers far outnumber employment opportunities in Broome and Chenango County. To add to that, the skill sets of the available labor pool and available jobs appear largely mismatched. Of those individuals that are employed, 30.1% are considered still living in poverty. For many, housing costs are exceeding a large percentage of their monthly income, which makes it extremely difficult to maintain permanent, safe, and affordable housing.

Residents of Broome and Chenango County are also faced with constant rising gas, grocery, state and local taxes, insurance and utility costs which is making homeownership more and more financially difficult. Grocery prices have increased 5.6% which is higher than the 4.1% rate of inflation and there does not seem to be an end in sight. High state and local taxes are placing a financial burden on homeowners. Energy costs are constantly rising, with 62% of the homes in Binghamton being built prior to 1939. Older homes usually consume more energy than newer homes. For low to moderate income homeowners, energy costs place financial strains on their limited incomes.

The COVID-19 Pandemic has also had a great impact on those individuals and families experiencing housing instability. Broome and Chenango County have different access to resources for people experiencing housing instability, especially those experiencing homelessness. Due to Chenango County being a smaller rural community, there are no homeless shelters available and those experiencing homelessness are placed in hotels for a short period of time. Due to limited capacity, the hotel is time-limited before having the individual has to return to the Department of Social Services to request a longer stay. Broome County, due to having an urban area, such as Binghamton, has emergency shelters, but not enough to meet the need of those experiencing homelessness. On top of navigating a complex service system to obtain emergency housing, the bigger challenge is finding a permanent and affordable place to live.

The COVID-19 pandemic has also affected current homeowners, as well as those looking to purchase their first home. Over 2 million homeowner households were significantly overdue on their regular housing payments as of December 2020, with 6% being delinquent for over 90 days. This places these families at heightened risk of losing their homes to foreclosure. Households with incomes below \$75,000 were more than twice as likely to be behind than households with incomes above \$75,000. ¹⁴The National Association of Realtors reported that the median price of existing homes for sale was \$353,900 in November 2021, which has increased 13.9% from 2020. After reach a significant low in 2020, mortgage rates for a 30-year fixed-rate are currently at 3.93%, which has been primarily driven by the Federal Reserve holding down lending rates. More attractive interest rates motivate homeowners to think about the possibility of moving, so they can buy more house for

¹⁴ (Consumer Financial Protection Bureau, 2021)

less money. In addition, the housing stock of available homes to buy is severely limited, which has led to extensive competition between buyers, even for properties previously considered average or sub-par. For families with low-incomes looking to purchase their first home, the bidding competition has almost priced them out of the market, forcing them to look homes that need significant repairs that they cannot afford or to wait on purchasing their first home.¹⁵

Key Findings-Update 2022

The U. S. Department of Housing and Urban Development (HUD) defines Extremely Low Income (ELI) persons as one that earns less than 30% of the region’s median income. In Broome County and Chenango County, ELI individuals have an income of less than or equal to \$16,100 in Broome and Chenango for an individual and \$27,750 for a family (4 individuals) in both counties. Based on average budgets, housing costs should not exceed 30% of income. Housing has become scarcer for those with little money. Earnings from employment and from benefits have not kept pace with the cost of housing and utilities for low-income and very low-income individuals. New York State Electric & Gas (NYSEG) has asked for substantial increases in recent years, which has made housing costs an even greater portion of a household budget. The Fair Market Rent (FMR), according to the 2022 HUD Fair Market Rents Schedule, for Broome County for a two-bedroom apartment is \$855 a month, and \$767 in Chenango, and a one bedroom is \$668 in Broome and \$638 per month in Chenango. In order to afford this level of rent, without paying more than 30% of income, a family must earn \$33,841 per year and an individual must earn \$25,300 respectively a year. Assuming a 40-hour work week, 52 weeks per year, this level of income translates into a housing wage of \$12.16-\$16.27 an hour. Although the New York State minimum wage is presently \$12.50 an hour, this still falls \$3.77 an hour short of the must have \$16.27 an hour to meet the Fair Market Rents.

Traditionally, research has identified the opportunities for socioeconomic advancement in the form of employment opportunities and/or higher wages. Maintaining economic stability is becoming increasingly difficult, especially to those employed in the service or retail sectors. In both Broome and Chenango County, many are employed in either service and/or sales sector. The current unemployment rate in Broome County is 3.7% and 3.90% in Chenango County. Due to the COVID pandemic, many companies in both counties had to lay off a large percentage of their workforce, leaving many unemployed. The Department of Social Services reported that many applying for assistance is due to unemployment benefits ending, limited job availability, and people not having the education or skills to obtain employment. DSS continues to see people needing assistance with housing, food, and utilities. In 2022, there has been a trend, known as the “Great Resignation” on the part of workers, encouraged by a low unemployment rate, to quit less-desirable jobs and exercise much greater choice is regards when and where to work. Data shows that New York State ranks lowest or second-lowest among all states in job openings, hires, and quits and that New York’s pandemic jobs deficit is much greater than all other states. This demonstrates the individuals in our state are looking for work to the same degree they were before the COVID-19 Pandemic, but they are finding jobs in much smaller numbers. In turn, employers are in a hiring crisis as they have open positions, but cannot find individuals that either want positions offered or are unqualified for the positions.¹⁶

Key Findings

When it comes to preventive care, less than 56% of Broome, and 48.5 % of Chenango, children in government sponsored health insurance programs have the recommended number of well child visits, compared with a 74.1% statewide rate. Broken out by age groups reported, 78.7% of children under 15 months, 75.7% between 3 and 6 years, and 52.7% age 12-21 received the recommended number of well visits in the service area. All of these figures are lower than statewide rates for the specified age groups, with the gap increasing for older children.

Broome and Chenango County children receive lead screenings at lower rates than peers throughout the state as well, however there has been improvement in the number of children being screened for lead, with the most significant improvements occurring in Chenango County. In 2019, New York State amended the Public Health to lower the definition of an elevated blood lead level in a child to 5 micrograms per deciliter ($\mu\text{g}/\text{dL}$) (previously 10 $\mu\text{g}/\text{dL}$), which has increased the number of children testing positive for lead. Among children born in 2015, 38.1% of children had at least two lead screenings by age 36 months, compared with a 57.3% statewide rate. Examination of trends shows substantial improvement of rates in lead screening among children (by age 36 months) with rates increasing from 31.7% in 2004 to 54.3% in 2013. However, there has been a decrease in the percentage of children receiving at least one screening by 36 months in recent years, decreasing from 67.1 in 2011 to 54.3 in 2013, and holding steady rates of about 38.0% for those receiving at least two screenings by 36 months. Simultaneously, the incidence of elevated blood lead levels among children under the age of 6 appears to be declining in most recent years, decreasing from 15.8 per 1,000 in 2015 to 7.9 per 1000 in 2016. Despite these gains, additional effort in the area of lead screening is needed to prevent lead exposure and identify children with high blood lead levels, especially when comparing Broome and Chenango County to the state of New York for the percentages of children receiving at least one or two blood lead tests by 36 months.¹⁷ (health.ny.gov, 2021)

Free and Reduced Lunch Program

The table below shows the number of students eligible for the Free and Reduced Lunch Program during January, 2020. The figures below include all School Food Authority agencies. 63.72% of the students in the report area were eligible for free or reduced lunches, compared to a statewide rate of 74.75%.

Supplemental Nutrition Assistance Program (SNAP) (formerly Food Stamp Program)

The number of persons receiving SNAP benefits and the total SNAP dollars issued per county in January 2019, within the report area is shown in below. The New York Office of Temporary and Disability Assistance reported that 18,822 households were receiving SNAP benefits totaling \$4,106,332, or \$218.17 per household.

Report Area	Household Receiving Benefits Total	Household Receiving Benefits Temp	Household Receiving Benefits Non-Temp	Persons Receiving Benefits Total	Persons Receiving Benefits Temp	Persons Receiving Benefits Non-Temp	Benefits Issued Total	Benefits Issued Temp	Benefits Issued Non-Temp	Benefits Per Household
Report Location	18,822	6,977	11,845	32,849	9,352	23,497	\$4,106,332	\$1,449,002	\$2,657,330	\$218.17

Households Receiving SNAP by Poverty Status (ACS)

The below table shows that according to the American Community Survey (ACS), 16,037 households (or 16.2%) received SNAP payments during 2019. During this same period there were 7,488 households with income levels below the poverty level that were not receiving SNAP payments.

Report Area	Households Receiving SNAP Total	Households Receiving SNAP Percent	Households Receiving SNAP Income Below Poverty	Households Receiving SNAP Income Above Poverty	Households Not Receiving SNAP Total	Households Not Receiving SNAP Percent	Households Not Receiving SNAP Income Below Poverty	Households Not Receiving SNAP Income Above Poverty

Key Findings-Updated 2022

There is evidence to suggest that consumption of fresh fruits and vegetables not only provides important macro- and micro-nutrients for good health, but also decreases the risk for certain types of cancers, cardiovascular disease, and stroke as well as overweight and obesity. The Dietary Guidelines for Americans 2020-2025 recommends balancing calories to manage weight, reducing/increasing specific foods and food components, and building healthy eating patterns. To manage body weight, the guidelines recommend controlling caloric intake, particularly for people who are overweight or obese, as well as increasing physical activity. Attention to healthy eating patterns at a young age can assist a person in maintaining a healthy nutritional pattern over time. The Expanded BRFSS data from 2013-2017 revealed only 31.9% of adults in NYS ate 1 or less servings of fruits and vegetables per day. This value was similar to NYS in which only 31.5% of adults consumed 1 or less servings of fruits and vegetables. Like physical activity, county-level data for nutrition among children and adolescents is currently lacking. The Youth Risk Behavior Surveillance System (YRBSS) provides one of the few sources of data about dietary intake for adolescents; however, this survey is conducted only every two years with limited information for specific localities. In 2017, 19.3% of students in grades 9 through 12 reported eating fruit or drinking 100% fruit juice 3 or more times per day, 32% reported 2 or more, and 60.8% reported one or more than once a day. Dietary consumption of fruits and vegetables as well as sugary drinks was similar across age groups and grade levels.¹⁸

Given that forming healthy eating patterns early in life can affect one's nutrition over the course of their life, highlights the importance of the Supplemental Nutrition Program for Women, Infants, and Children (WIC) provided by Greater Opportunities. WIC provides nutritious foods, nutrition education, breastfeeding support, and referrals to health care and social services for low-income families, and it plays a crucial role in improving lifetime health for women, their infants, and young children. In response to the COVID-19 pandemic, the Families First Coronavirus Response Act, enabled WIC services to be provided in new ways, including waving the requirement for physical presence for WIC certification. In addition, because many of the staple foods available to WIC participants were experiencing shortages during the pandemic, WIC expanded the approved foods for WIC families to include a broader array of package sizes and brands to ensure families had the needed food for proper health and nutrition. WIC also partnered with manufacturers and retailers to address disruptions to the supply chain, including most recently, the national shortage of baby formula that has occurred in 2022.¹⁹ Research has found that women who participate in WIC give birth to healthier babies who are more likely to survive infancy. With the improvements WIC has made to the food packages since 2009, data demonstrates that healthier food environments in low-income neighborhoods, as well as, better access to fruits, vegetables, and whole grains, provides better nutrition for all consumers regardless of whether they participate in WIC.²⁰

ALICE

ALICE Data

ALICE (Asset Limited, Income Constrained, and Employed) uses American Community Survey (ACS) data, and shows the gap between the Federal Poverty Level (FPL) and the actual amount of money needed to afford a bare-bones household budget. The combination of households in poverty and ALICE households are deemed to be part of the ALICE Threshold. Depending on the county, ALICE uses 1, 3, or 5-year ACS estimates. For the most recent ALICE Report, data shows that of the 96,155 total households in the selected area, there are 15,634 households at the FPL, and 25,623 households that are above the FPL but still struggle to meet a minimum household budget.

Key Findings-Update 2022

Of those individuals working and living in New York State, 31% of the population is considered to be living at the ALICE threshold, which means that they earned gross income above the Federal Poverty Level, but less than the cost of living in their county. In Broome County, 26.8% of the population live below the ALICE threshold, with 26.2% of the population in Chenango County living below the ALICE threshold. Although both counties have a lower ALICE average than that of the state, the ALICE population is significantly higher than those living below the poverty level in both counties. Due to the fact that most of those living at the ALICE threshold have income above the Federal Poverty Level, they are most often disqualified from the social programs that could alleviate some of their financial stressors, such as rent assistance or SNAP benefits. Community action agencies, such as Greater Opportunities, provide many programs where the income qualification is at or below 100% of the Federal Poverty Level, which many of those living at the ALICE threshold would income qualify for. In addition, the programs are designed to assist individuals and families, whether it be financially, with counseling, or through a specific service, to become self-reliant and effective members of their communities.

Client Focus Groups-Update 2022

Greater Opportunities invited clientele from all program areas to participate in focus groups to gain qualitative information on their perception on the causes and conditions of poverty within their communities. Twenty clientele participated in the four focus group sessions offered and participants were from both Broome and Chenango Counties. Participants were from the following programs: Head Start, Early Head Start, Supportive Housing Programs, Housing Rehabilitation, and WIC. Focus groups participants were also asked to provide perspective on community conditions, including strengths and areas for improvement. Focus group participants were presented with the following questions and prompts for discussion:

Q1a: What are some things about our community that make it a great place to live?

Q2a: What have you noticed within our community that could use some improvement?

Q3a: With the things that we would like to see improved (as mentioned earlier) do you know people that are affected by these things/needs?

Q3b: How can families that have been affected by these things be supported?

Q4: The past year has been difficult with the COVID-19 pandemic. Can you tell us how the Pandemic has affected you and/or your family?

Q5: Are there any programs and/or resources that you would like to have available in response to the COVID-19 pandemic?

Q6: Have you experienced any challenges in accessing any services in our community? (i.e. health care, addiction treatment)

Q7: How do you feel about the availability of safe and affordable housing, either to own or rent, in our community?

Q8: Is there anything you can think of that Greater Opportunities could do differently to serve you better in terms of creating the life you want for yourself?

Q9: What are the sources of strength that you draw on if challenges arise?

Summary of Themes:

1. The community has assets that promote quality of life.

When asked about things that make our community “a great place to live,” participants mentioned access to resources to meet their needs, including churches, shopping, farmer’s markets, fairs, and a

supportive community. The “rich history”, the “small town feeling” and the “neighbors helping neighbors” attitude were all things identified as assets, saying that, *“If I didn’t have my neighbors support when I was sick and lost my job, I do not know what I would have done. Knowing I had people that cared for me and were supportive meant a lot.”* In all focus groups, participants voiced their concerns regarding the continuing Corona Virus pandemic and expressed being weary that the pandemic has gone on for close to two years. Other things mentioned were schools and the variety of education options that are available, local law/fire departments, resources for food and housing and the low cost of living. One participant stated, *“I’m only where I am today because of the many opportunities that were made available to me and if there were not different choices in the education options, I would not have even tried. Being able to take adult education classes, vocational courses at my own pace was rewarding and helped me succeed. It gave me the courage to continue to keep moving forward.”* In addition, participants named parks and local rivers as sources for recreation as assets both counties.

2. The community has areas that could use some improvement.

When asked about areas that needed to improve in the community the participants cited lack of summer programming for youth, lack of choice in medical providers, especially specialists, lack of transportation, and response time of law enforcement as their top areas of concern. In regards to specialists, many participants noted concern over the lack of dental and vision care for Medicaid recipients. Participants stated that they need to either travel outside of county to get services, which can be costly, or wait for several months on a waiting list in order to get services for their children and family members. Largely discussed by group participants was their concern over transportation resources in both Broome and Chenango. The biggest concerns being that transportation is limited, expensive and inconvenient. As stated by one participant, *“I have trouble getting to my medical appointments due to the lack of public transportation and the inconsistency of medical transportation. Even if I can get medical transportation, I may have to wait hours after my medical appointment in order to get transportation back home.”* Participants stated there are no options for those who live in the more rural areas which significantly limits access to a lot of services for them. It should be noted that transportation came up as an area of concern in several different conversations. For example, when talking about COVID -19 concerns, transportation was affected and very limited due State and County restrictions implemented during the COVID-19 shut down. Transportation also was an area of concern in regards to education and accessing Head Start services. One parent expressed concern about the Head Start programs eliminating transportation in recent years as it has made it difficult for parents to get their child to and from the program, especially with the high price of gas and on-going vehicle issues. One participant suggested that the public schools assist with transporting the children.

Several participants expressed concerns over the lack of behavioral health services in both counties, especially in the areas of mental health and addiction services. Participants noted that the COVID-19 pandemic has only intensified the need for these services in both counties, as many of their loved ones were only able to attend services remotely, or not at all, which caused them to relapse in their

addiction. Suggestions included more therapists to provide 1 to1 counseling, as well as decrease wait time for those seeking services, and an increase in the length of stay for those individuals requiring inpatient stays for substance abuse and mental health disorders. In reference to the housing programs, participants stated the need for more safe and affordable housing, transitional housing, supportive housing, and the need for better homeless services. The theme of more homeless services was definitely noted more commonly among Chenango County participants as there had recently been several news articles about those experiencing homelessness living in local hotels and that these individuals were at risk of losing this emergency housing due to a local funding source being depleted. Participants voiced the need for the development of more affordable housing with supportive services, specifically aimed at those individuals and families experiencing homelessness.

3. When it comes to specialist medical providers, such as substance abuse treatment, community systems are inadequate.

Many of the focus group members discussed the extreme difficulty in accessing medical specialists, such as oncologists, gastroenterologists, and dentists. Focus group members from both counties expressed the difficulty in finding a dentist that accepts Medicaid and that often, they are forced to drive a minimum of an hour in order to get dental services. In addition, they spoke about having limited medical specialists, especially in Chenango County, and having to go to another county in order to receive medical care for a specific condition. Many discussed the extra expense this causes, especially when on a limited income. Participants were vocal in describing the difficulties experienced when trying to in access substance abuse treatment services. One participant stated, *“There’s not a lot of local programs in our area.”* They also commented on systems’ doing things that aren’t helpful, such as identifying substance abuse as a crime rather than a disease. For example, one participant said, *“People reach out for treatment and cannot find any, who are they supposed to call?”* Two participants discussed their experience that the lack of addictions services caused in their personal lives. One participant explained that his brother had tried to obtain addiction services on several occasions, but was never able to and passed away due to a drug overdose. Another participant stated that her daughter had a severe overdose, which has caused her daughter to experience ongoing medical issues, which has led her to having to raise her granddaughter. According to one participant, *“This is a community issue and it affects all of us. We need to address this as a community problem and figure out how to make changes.”*

4. Mental health services in our community are lacking overall, specifically for adolescents.

A major theme that was present in all focus groups was the lack of mental services available in Broome and Chenango Counties. Participants felt that there are a lack of male professionals in the mental health field, which can make it difficult for males to find an appropriate therapist if they are not comfortable with a female therapist. Focus group participants also discussed their struggles with obtaining an appointment at the mental health organizations that are currently available in each county, with many stated that they had to wait months before getting an initial

appointment. This problem has been further exacerbated by the COVID-19 pandemic as appointments were being conducted virtually, which made it very difficult for those in rural areas that have limited internet access. Participants expressed that a better system needs to be developed to support children's social-emotional development and behavioral health. Many expressed concerns that there were not enough mental health services for children in the area, saying variations on the statement, *"There's definitely not enough; there is a wait list for any kind of service."*

5. The COVID 19 Pandemic has affected individuals and families in different ways.

According to participants, being quarantined and not being able to participate in normal activities outside their home was a large frustration over the last year. Although COVID restrictions have been significantly reduced due to the COVID vaccine being readily available, participants stated that there are still restrictions in place in regards to going into the school to volunteer or participate in parent programming. One participant stated, *"I feel like I have missed out on my child's early education experience because I have been unable to volunteer in his classroom over the last year."* Participants also expressed concern about their children's education declining significantly because classes were sporadic and inconsistent due to classes being held virtually or in-person depending on COVID exposure of children or staff. There is concern that there will be a gap in their education that may take years to overcome. The parents in the groups expressed that the pandemic affected their children's socialization and mental health. A parent of a Head Start child added, *"Lack of parent involvement in school activities has been restricted, which has really had an impact on parents feeling connected and involved, which, in turn, affects my relationship with my child."* Participants were also in agreement that nutritional wellness overall has been affected because the quality of nutrition has declined due to eating at home more frequently, less exercise, weight gain and depression from lack of interaction with others. Other things mentioned by the group were: having to make appointments for things you didn't previously have to, such as the DMV, is very time consuming; increasing cost of living, including foods, gas, utilities, etc., and the lack of internet services available to families in rural areas, which has limited their access to remote services.

6. Lack of safe and affordable housing in our community.

With regard to thoughts on safe and affordable housing, the focus groups felt that although there are few options available in the area overall, as there is not enough affordable housing to choose from and very often the ones that are affordable, have a very long waiting list. For example, a participant recovering from addiction described how housing stability allowed her to complete her recovery, saying, *"For me, for instance, when I got sober, I couldn't really work because I needed to focus on me, go to programs, [etc.]. I needed stable housing in order to do that. Medicaid wasn't going to pay for long-term care, but I was able to secure an apartment at Greater Opportunities that had a subsidy and that in turn, let me go to the groups. All of that has allowed*

me to work on myself, to get me where I needed to be, and where I am now.” Other participants stated that more affordable senior housing, handicap accessible apartments, as well as larger units for families, were needed. One participant stated *“If you are a person who is “down and out,” you will have very little chance of finding a place.”* Participants also expressed that due to the COVID-19 pandemic and the eviction moratorium put into place in New York State, landlords are very reluctant to rent to individuals and families that have Section 8 or DSS vouchers. Others expressed concern over the lack of housing available for larger families in both counties. Focus group participants that currently reside in our supportive housing programs stated that they would like to have more activities during the evenings and weekends in order to promote community among residents.

7. Focus group suggestions on possible programs and resources that would be helpful in response to the COVID-19 pandemic.

The group agreed that making public activities safe and available for use should be a priority as it would create more opportunities for people to safely exercise and enjoy activities outside. One mother suggested creating classes/workshops for parents on how to use Chromebook and other programs on the computer that come along with virtual learning since this has been a struggle for her, as well as many of her peers. Along with that, another participant stated, *“An available, safe space for students to use the internet when they do not have it at home would be helpful as well.”* Another suggestion that sparked an engaging conversation was when a participant stated she would like to see financial assistance for internet services in the homes of those who cannot afford it. She stated, *“Spectrum was offering discounted rates to families in need, but has now raised their rates.”* Lastly, participants agreed that more financial support for families with things like utilities, food stamps and other monthly bills would be extremely beneficial. Many participants stated that they *“were over”* the pandemic and were ready *“for things to get back to normal.”*

8. Sources of strength focus group participants draw on in the face of challenges.

The group had a clear understanding of the definition of personal resilience in response to this question. Participants described strength in their support systems, including prayer, social connections such as neighbors, church, community program, family and other social supports. For example, one participant offered, *“My case manager, Conor Johns, at Greater Opportunities, is a huge help to me when I need support.”* Talking further about these topics another participant added, *“I advocate for myself at times. I’ve found that sometimes, you need to pull from your own inner strength. Like, move forward and live this life I’ve been given.”* Throughout the course of the discussion, participants expressed gratitude for Greater Opportunities and the services/role they played in changing their lives for the better. About Housing Programs in particular, participants described the support they receive that goes beyond the housing they receive. Representative comments include, *“I feel very blessed for the help and support that I have been given from Greater Opportunities. They truly care for their clients.”* More than one participant shared the suggestion that they would like to have more programming options from Greater Opportunities to provide classes and training on how to obtain gainful employment in the community. One

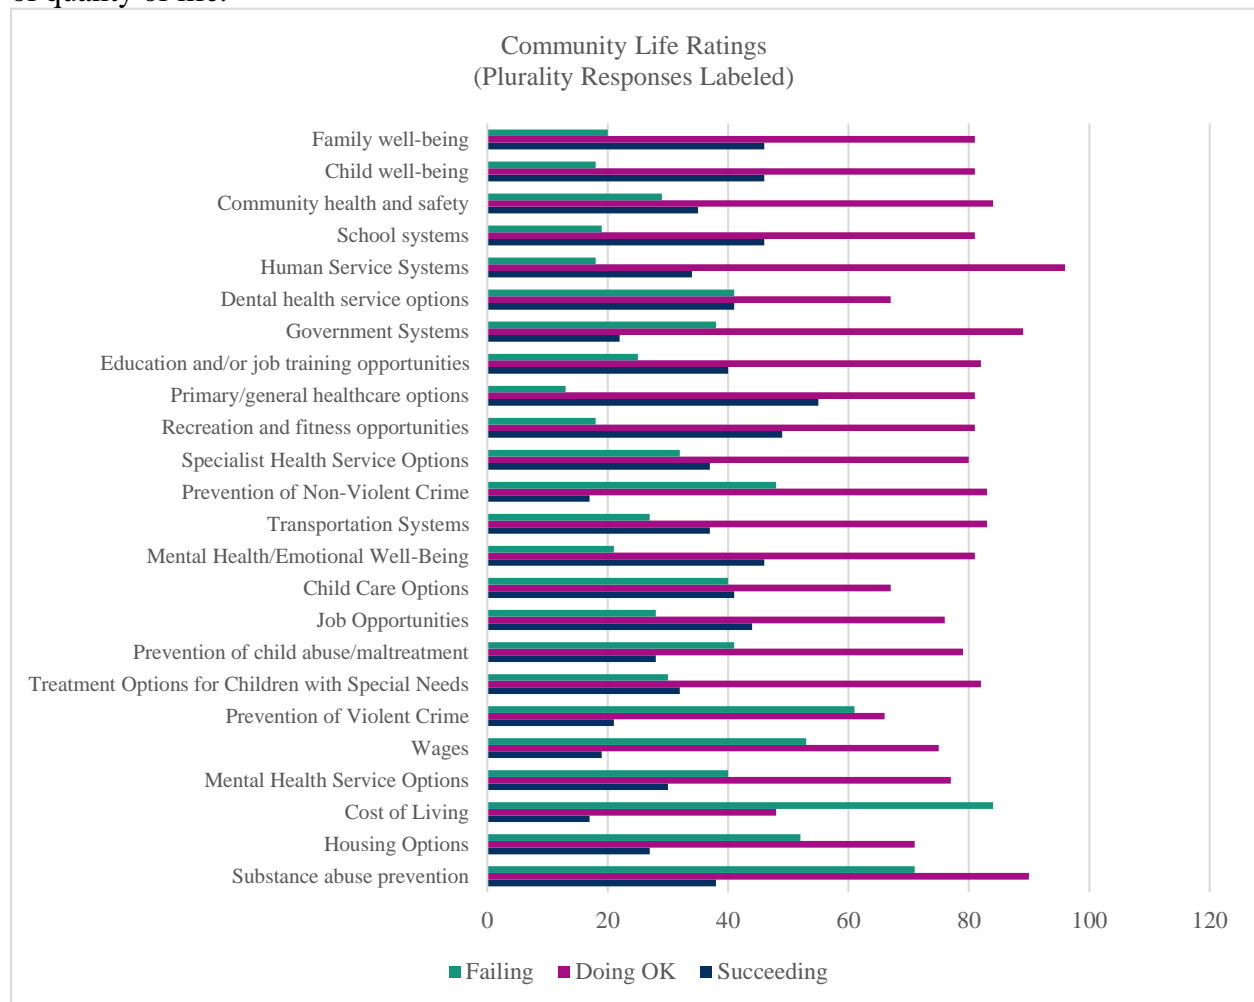

participant stated that they would like Greater Opportunities to create and send a pamphlet to all current clientele to explain all the programming that is available to them in our agency. Participants voiced that they are not always aware of all the programs that are offered by the agency.

Needs of Low-Income Individuals, Children and Families: Client Surveys-Updated 2022

This section of the report summarizes the quantitative and qualitative data collected through surveys from program participants involved with Greater Opportunities programs. In addition, it presents qualitative data collected from other Greater Opportunities stakeholders (that do not participate in programs) who responded to surveys. There were a total of 202 clientele that participated in the survey.

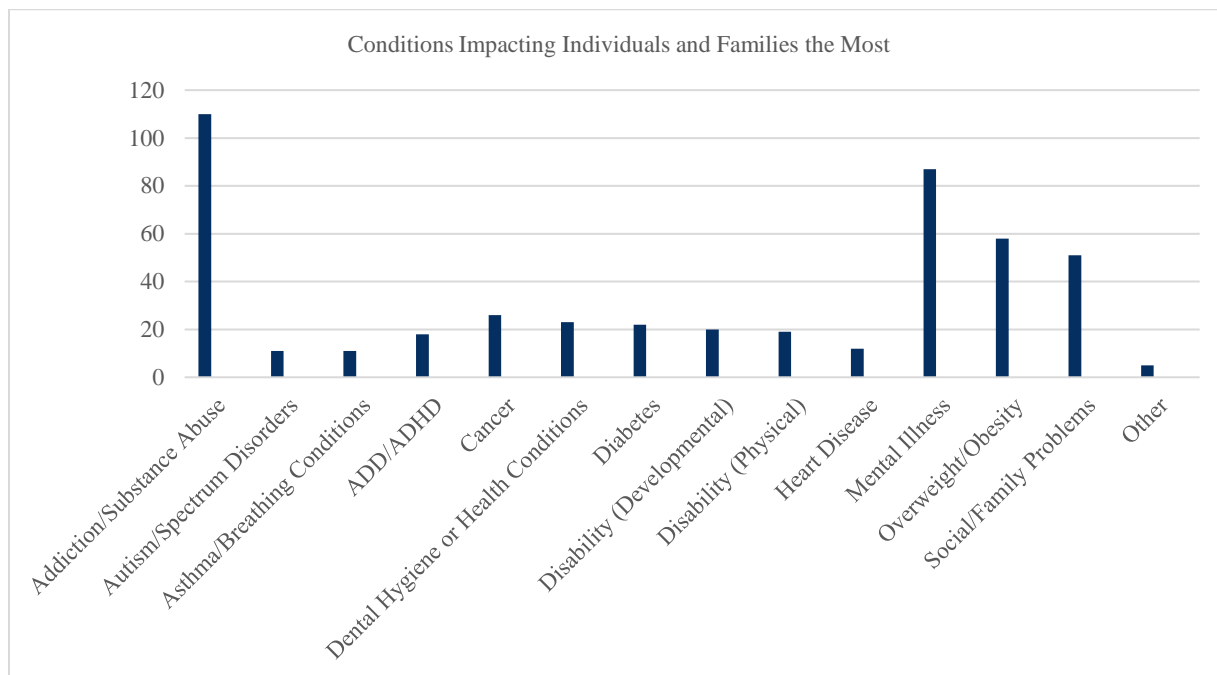

Question 1: Community Ratings

Respondents rated the community on aspects of quality of life as “Succeeding (A)”; “Doing OK (B-C), or “Failing (D-F)”. The chart below shows the distribution of “grades” given. Pluralities, (in most cases, majorities) of respondents rated the community as “Doing OK” on most aspects of quality of life.

Question 2: Which conditions are impacting individuals and families the most?

The survey asked respondents to select from a list of conditions they think affect individuals and families the most. The following chart shows the most frequently selected choices.

Question 3: What programs could Greater Opportunities offer that would help improve the community?

An open-ended question asked respondents to describe the programs that they would want to see offered by Greater Opportunities in order to improve the community. Of those surveyed, many answered that would like to see Greater Opportunities continue to offer safe and affordable housing, especially for low-income seniors and those experiencing homelessness. One respondent wrote, *“More senior housing. I have a lot of senior friends who need a safe place to live that they can afford, is clean not run down, and easy to manage daily tasks that get harder as you age.”* Several respondents indicated that other housing in the area is *“unaffordable,” “unsafe,”* or *“blighted.”* One respondent stated that *“Greater Opportunities builds good housing and we need more of that in the area.”* Respondents also indicated a need for the agency to do more networking and collaborations with other social service agencies in order to provide more comprehensive services. Respondents also identified a need for more housing rehabilitation and first-time homebuyer grants in both Broome and Chenango County.

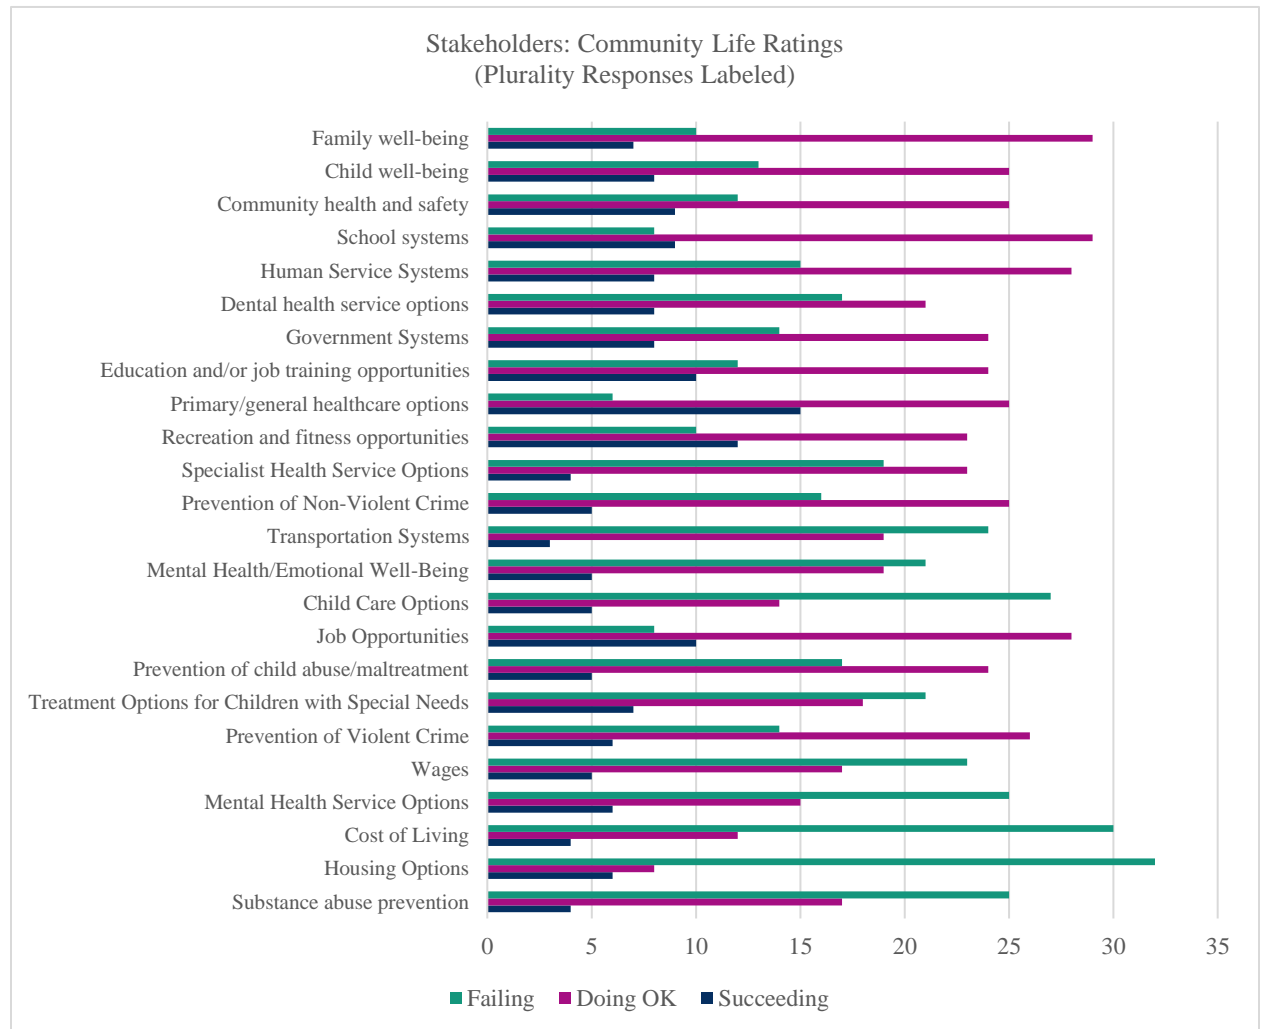

Respondents identified challenges primarily in the area of money, or jobs, offering comments such as, *“Cost of Living;” “Financial Stability,” “Day to day and monthly costs of living,” “Laid off*

due to COVID,” and “Not having a job.” Related challenges reported included crime rate, transportation and child care, expressed in comments such as, “Finding affordable housing for those on fixed incomes;” “Getting into our own home,” “Transportation,” “Keeping our vehicle up and running,” “Finding childcare for summer,” and, “Child care that is affordable.”

Respondents from Head Start and Early Head Start programs stated that they would like to see more center-based programs along with more home visitors. Other respondents asked for extended hours for non-traditional worker and for the school year to extend into the summer months. Some participants also asked for Early Head Start programming in Broome County. In addition, those respondents that were parents to Head Start or Early Head Start would like to see a return of parents being allowed back in the classrooms.

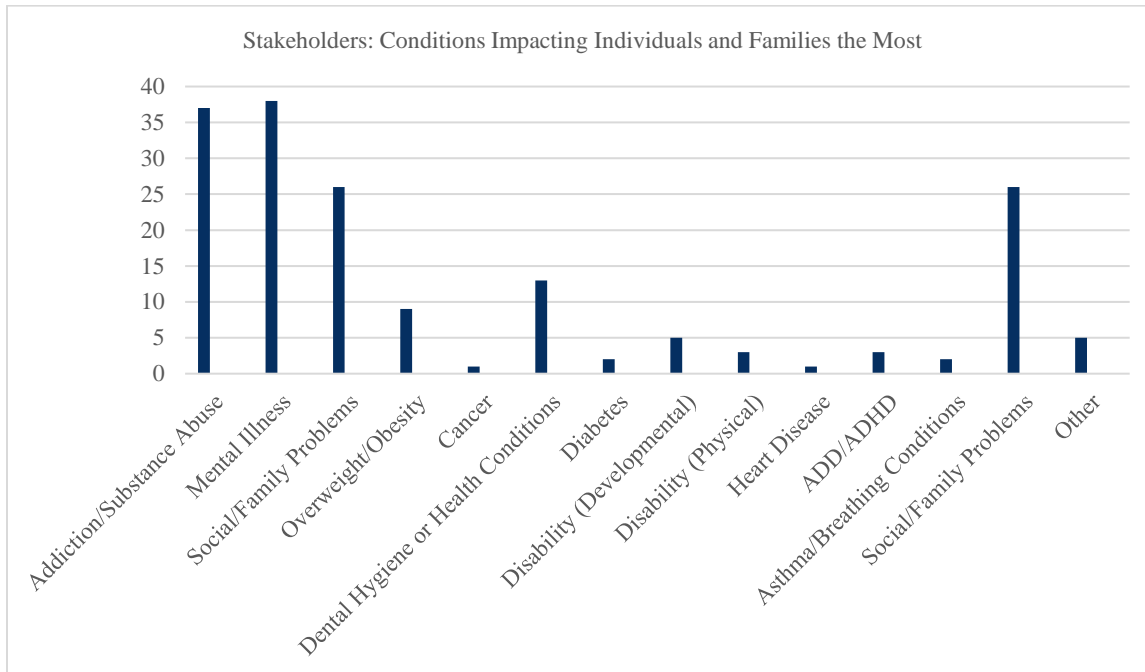

Needs of Low-Income Individuals, Children and Families: Stakeholder Survey

Forty-six Greater Opportunities stakeholders who are not Greater Opportunities program participants responded to a survey to rate aspects of community life, rank conditions facing individuals, and describe their challenges and the strengths they draw on to address them. The sector the respondents represent are as follows: Community Partners, Community-Based Organizations, Faith-Based Organization, Educational Institutions, Public Sector, and other community members.

Question 2: Which conditions are impacting individuals and families the most?

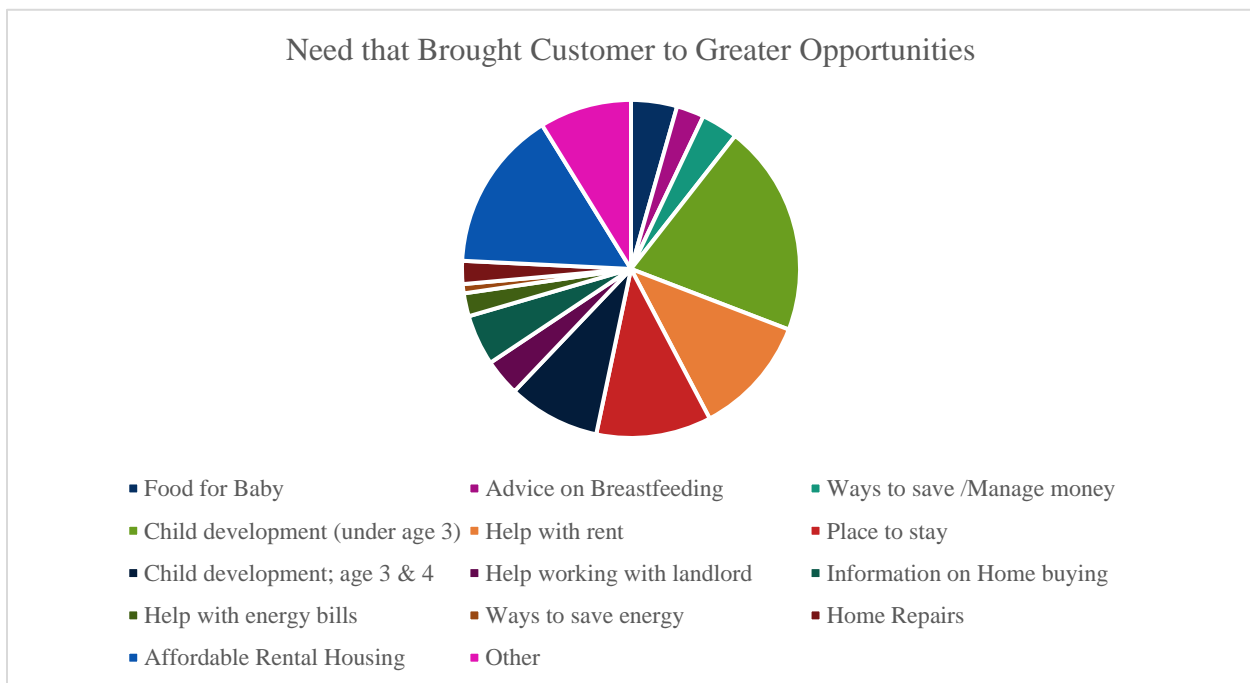

The survey asked stakeholders to select from a list of conditions they think affect individuals and families the most. The following chart shows the most frequently selected choices.

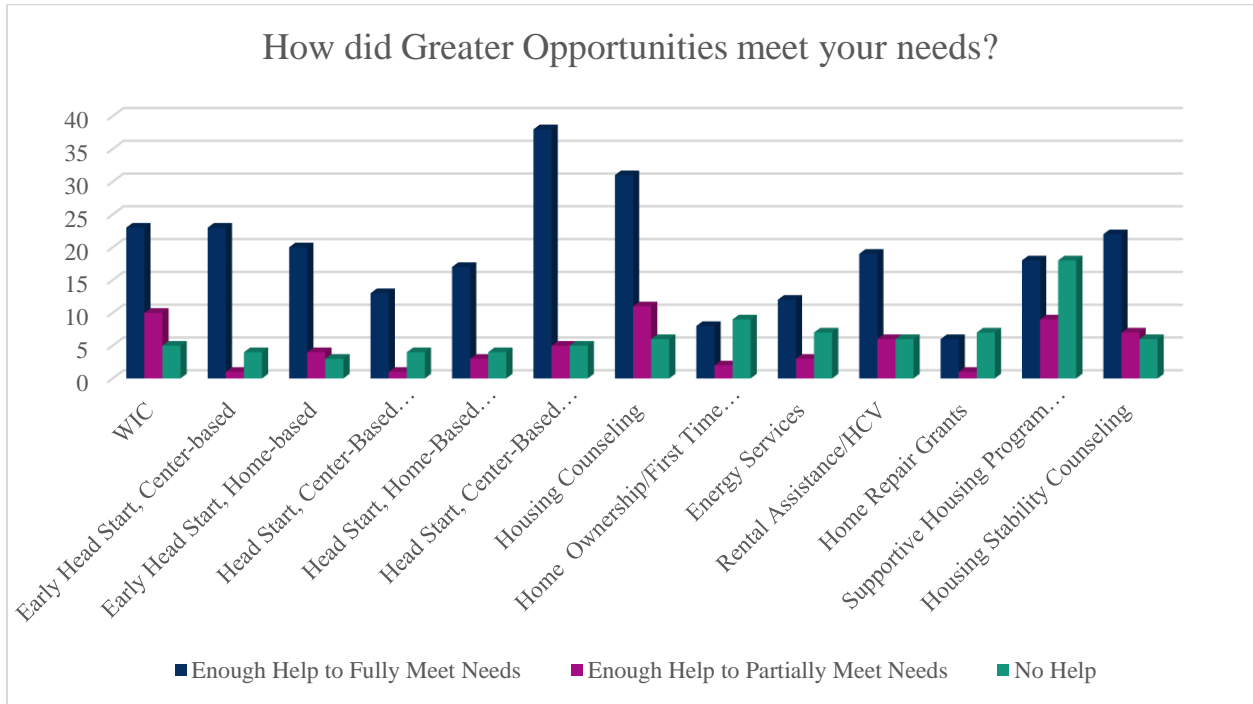

Client Satisfaction Surveys

There were 150 Greater Opportunities customers who completed the client satisfaction surveys. Data from these surveys is summarized below.

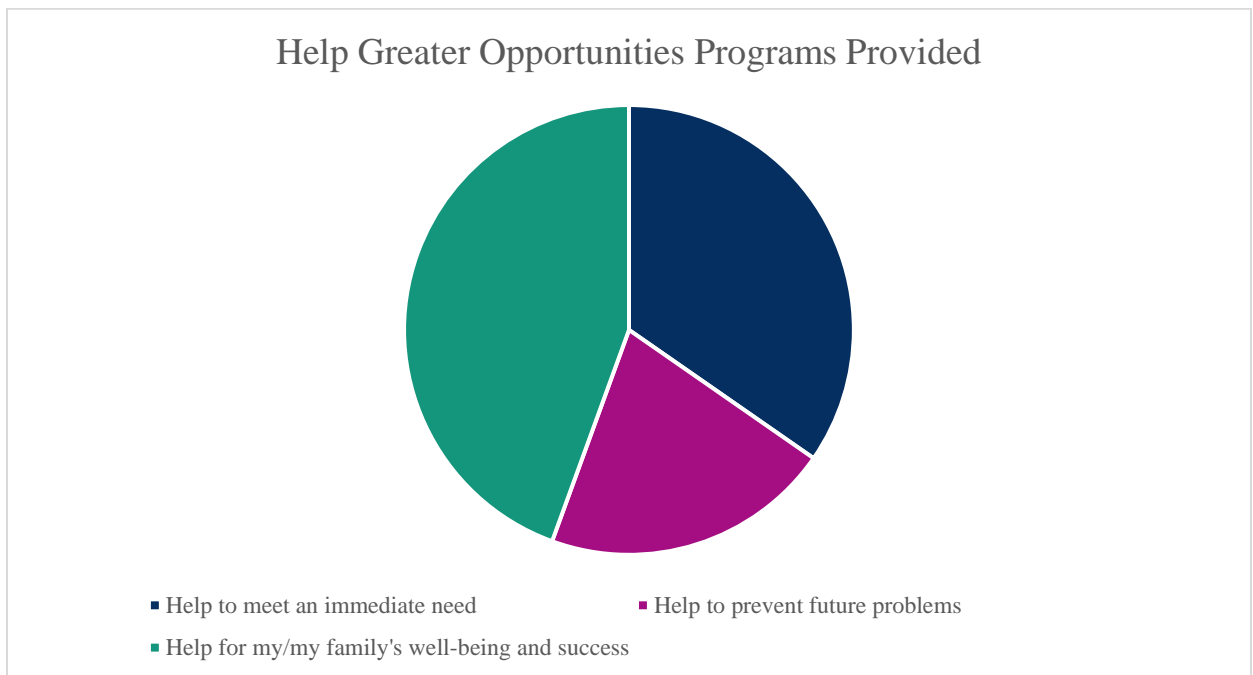

Question 1: What need brought you to Greater Opportunities?

Question 2: For each program used at Greater Opportunities, how did the program meet your needs?

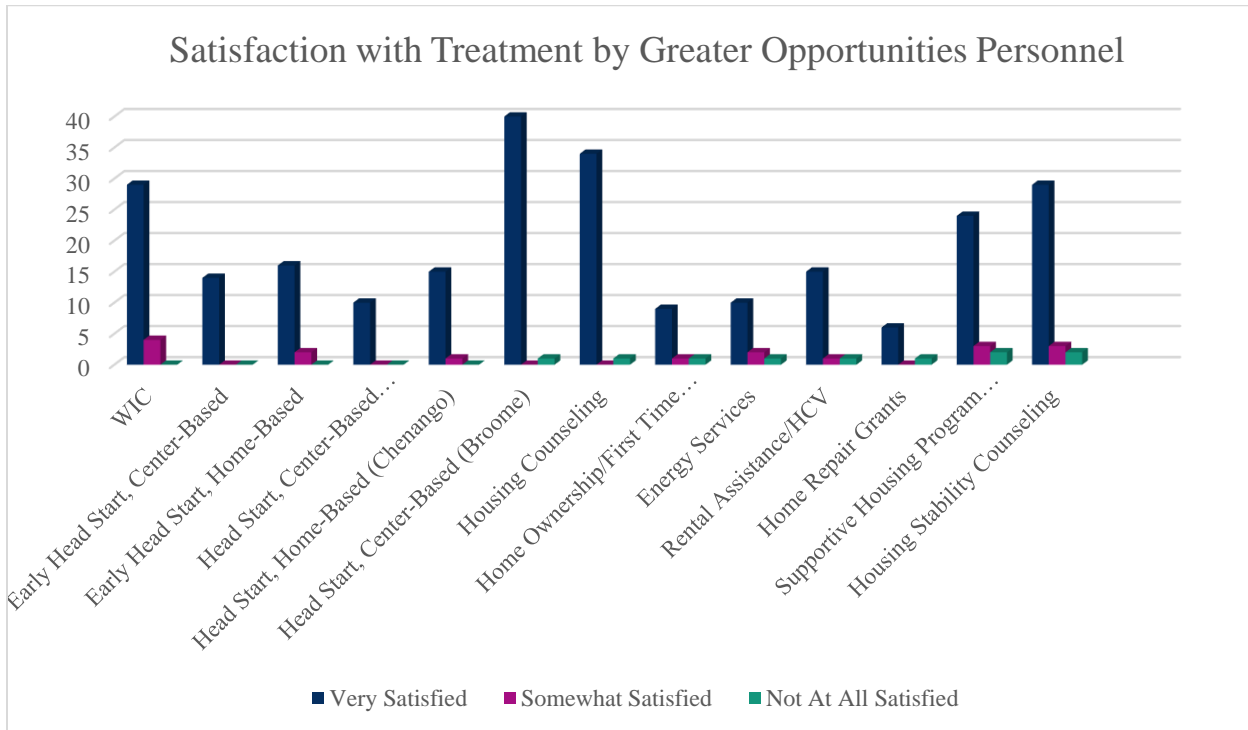

Question 3: For the program you used, did the program meet your immediate need, prevent future problems, or help with your/your family’s well-being and success?

Question 4: How satisfied were you with the quality of the service you received?

Question 5: How satisfied were you with the way you were treated by Greater Opportunities personnel?

Question 6: How satisfied were you with the ease of working with Greater Opportunities programs?
